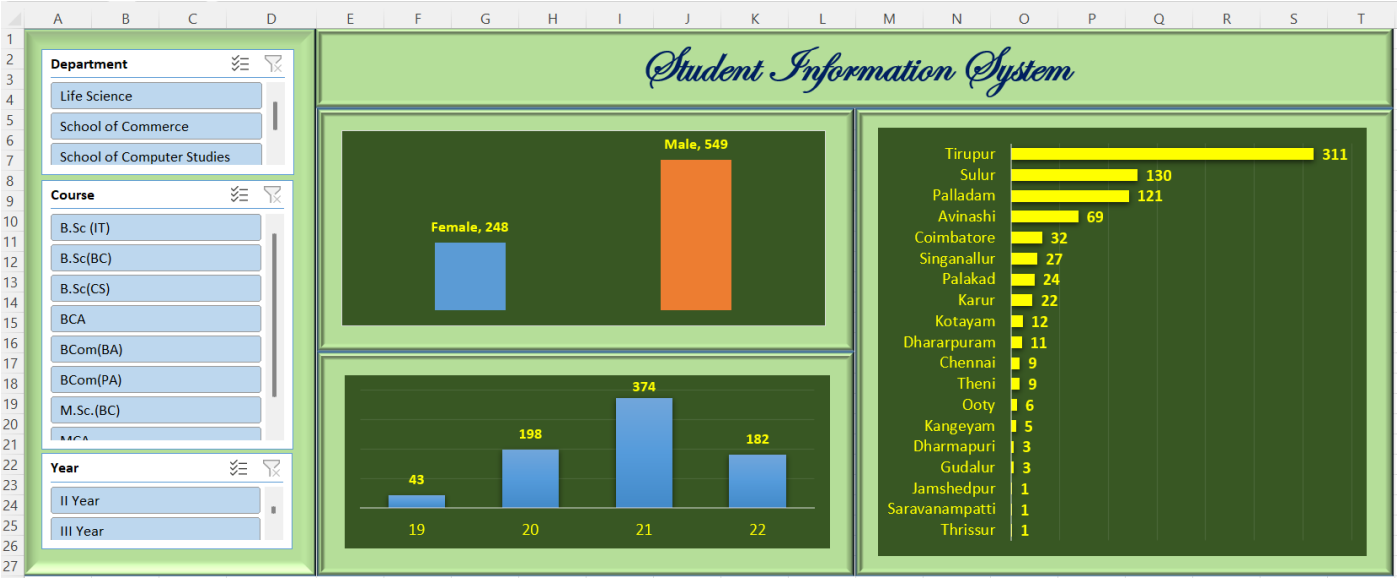
Read Me



1. Student Strength KPIs

These are the **headline numbers**.

- **Total Students**
- **Total Courses Offered**
- **Total Departments**
- **Active Batch**
- **Current Academic Year**

---

2. Gender Diversity KPIs

Useful for **academic reporting & accreditation**.

- **Male Students**
- **Female Students**
- **Male %**
- **Female %**
- **Gender Ratio (M:F)**

📊 *Great KPI for pie or donut chart*

---

3. Age & Demographic KPIs

Good for **student profile analysis**.

- **Average Age**

- **Youngest Student Age**
- **Oldest Student Age**
- **Age Range**

---

4. Geographic Distribution KPIs

Very useful for **regional outreach analysis**.

Town-wise Students

- **Tirupur**
- **Palladam**
- **Sulur**

District-wise Students

- **Tirupur District**
- **Coimbatore District**

State-wise Students

- **Tamil Nadu**

📍 *Ideal for bar chart or map visualization*

---

5. Course & Department KPIs

Useful for **department-level dashboards**.

- **Course Concentration**
- **Department Strength**
- **Average Age by Department**
- **Gender Mix in Department**
    - Male
    - Female

---

6. Batch & Academic Progress KPIs

Good for **academic planning**.

- **Batch Year**
- **Students in Final Year**
- **Batch Completion Readiness**

---

7. Date-based / Age Validation KPIs

Useful for **data quality & teaching date functions**.

- **Age Accuracy Check** → DOB vs Today matched ✔
- **Students Turning 28 This Year**
- **Students Below 27**

---

8. Suggested KPI Tiles for Excel / Power BI

Top row KPIs you can show as **cards**:

1. Total Students
2. Male %
3. Female %
4. Average Age
5. District Coverage
6. Town Coverage

---

9. Bonus (Perfect for MBA / Analytics Lab)

You can ask students to:

- Create **Pivot Tables**
- Design **Gender vs Town dashboard**
- Use **COUNTIFS, AVERAGEIFS**
- Build **interactive slicers** (Course, Gender, Town)
